

Julien MAIRE , Data Room , 2008

view of the installation 6 channels low resolution projection

The "Data Room" is an installation in Situ, first version was produced for the "White night" in the City hall (Metz, France) , 6 channels low resolution projections, (6 projectors share flow of random data as well as errors of programme ) Low-tech projections are made with 6 adapted cell phone LC displays. The idea of the "Data Room" is to fill partially or completely the room with minimal bytes pictures. Obsolete monochrome LC Display uses a simple binary view of numbers, converted in black or white. In a sense they display a kind of authentic basic view of the codes.
